Computer is an electronic device that takes data as an input and processes it under the control of a set of instructions (called program) and then produces a result (output), and all the set is called as computer system.

A computer system is a set of integrated devices which takes input, process it and give output. Also it store data and information.

computer system allows users to input, manipulate and store data. Computer systems include a CPU, monitor, keyboard, mouse and other optional components.

MOTHERBOARD

- The **motherboard** is the backbone that ties the **computer's** components together at one spot and allows them to talk to each other. Without it, none of the **computer** pieces, such as the CPU, GPU, or hard drive, could interact.
- Total **motherboard** functionality is necessary for a **computer** to work well.

CPU

➤ A **central processing unit (CPU)**, also called a **central processor**, **main processor** or **just processor**, is the electronic circuitry within a computer that execute instructions that make up a computer program .

The CPU performs basic arithmetic, logic, controlling, and input/output (I/O) operations specified by the instructions in the program.

This contrasts with external components such as main memory and I/O circuitry, and specialized processors such as graphics processing units (GPUs).
